

[New Model] – exercise 2.5

Changes:

- Added the pic attribute to both recipes and ingredients models to store image paths, allowing the system to display images.
- No other changes were made, as the existing structure still adheres to database design principles - 1NF (First Normal Form): Ensures all attributes store atomic values, and recipesingredients acts as a junction table for the many-to-many relationship.

[Before] – exercise 2.3
